John-

I have revised the workplan based on our recent calls. Please feel free to edit as you see fit, especially if I missed any salient point(s) or your field work has uncovered anything else important. You can forward the final version to Dan unless there is some issue that you see needs vetting.

I suggest we send this to Dan ASAP. I would also suggest that we communicate regularly with Paul R and the Papadapolous folks once they get rolling. Using an adaptive management/iterative approach this time instead of the traditional linear (plan-result) approach should serve R7 needs much better.

Thanks for all your input-Dave
